

May 14, 2014

The Honorable Barbara A. Mikulski
Chairwoman
Senate Appropriations Committee
S-128, The Capitol
Washington, DC 20510

The Honorable Richard Shelby
Ranking Member
Senate Appropriations Committee
S-146A, The Capitol
Washington, DC 20510

The Honorable Harold Rogers
Chairman
House Appropriations Committee
H-305, The Capitol
Washington, DC 20515

The Honorable Nita Lowey
Ranking Member
House Appropriations Committee
1016 Longworth House Office Building
Washington, DC 20515

Dear Chairwoman Mikulski, Chairman Rogers and Ranking Members Shelby and Lowey:

We respectfully request that you support **\$32 million for the Centers for Disease Control and Prevention's (CDC) National Healthcare Safety Network (NHSN) and the Prevention Epicenters Program; \$30 million in the President's budget for the Detect and Protect Against Antibiotic Resistance Initiative; and ask for your continued support of the Advanced Molecular Detection (AMD) Initiative at \$30 million** in the FY 2015 Labor, Health and Human Services, Education and Related Agencies Appropriations Bill.

These programs are uniquely positioned to detect the transmission of infections that are highly resistant to antibiotics and to protect patients and the public from disease and death related to healthcare-associated infections (HAIs).

HAIs are among the leading causes of preventable harm and death in the United States. In hospitals alone, CDC estimates that one in 25 hospitalized patients has an HAI. Antibiotic resistance is one of the most critical public health and patient safety threats facing us today, causing an estimated two million illnesses and approximately 23,000 deaths annually.

Our national HAI tracking system, NHSN, along with the Prevention Epicenters research program, are critical tools to address scientific gaps in HAI detection and prevention. NHSN helps us monitor HAIs and understand the extent of the HAI problem, while the Prevention Epicenters conduct the research necessary to address scientific gaps regarding prevention of HAIs and help us better target solutions to protect patients from harm. Increased funding for NHSN would support expanded tracking of antibiotic use and resistance patterns, which are critical to the success of CDC's antibiotic resistance initiative.

The CDC's Detect and Protect Against Antibiotic Resistance Initiative would save lives and reduce healthcare costs by establishing a robust network of five regional labs to detect the deadliest antibiotic resistance threats and protect patients and communities through the rapid identification of outbreaks and newly emerging resistance patterns.

Finally, we appreciate your support for the AMD initiative in bioinformatics and genomics in FY14. This funding will allow CDC to more quickly determine where emerging diseases come from, whether microbes are resistant, and how pathogens and diseases are moving through a population. We ask for your continued support of this program.

In summary, we ask that you provide **\$32 million for the CDC's NHSN and Prevention Epicenters, \$30 million for the Detect and Protect Against Antibiotic Resistance (AR) Initiative, and \$30 million to continue support for the AMD Initiative** in the FY 2015 Labor, Health and Human Services, Education and Related Agencies Appropriations Bill.

Thank you for the opportunity to make the case for these strategic programs that improve patient outcomes and reduce healthcare costs.

Sincerely,

Alliance for the Prudent Use of Antibiotics
